| THEME<br>Artificial Intelligence (AI) | STATUS<br>Available for testing | COMPANY<br>16422411 Canada Inc. | TECH. EVALUATION SCORE<br>92 / 96 |
|---------------------------------------|---------------------------------|---------------------------------|-----------------------------------|

Technical evaluation score reflects evaluation against ISC TS12 criteria; not a procurement commitment, contract award, or guarantee of departmental testing.

PURPOSE

TPTN provides a controlled prototype scenario for Government of Canada departments to assess AI-assisted trade compliance workflows, structured document processing, FTA eligibility logic, ESG workflow support, human-in-the-loop review, and audit-ready export records using fictitious or sanitized data.

CONTROLLED TEST SCENARIO

- 1. Department provides fictitious or sanitized trade documents.
- 2. TPTN ingests and extracts structured data.
- 3. AI-assisted logic checks HS codes, FTA eligibility, permits, restricted-party indicators, and documentation requirements.
- 4. Uncertain outputs are flagged for human review.
- 5. Audit records are generated with timestamped evidence.
- 6. Department reviews usability, traceability, accuracy, and testing metrics.

WHAT WOULD BE ASSESSED

- Document parsing accuracy
- Trade-rule validation latency
- FTA eligibility and tariff logic
- ESG workflow support
- Human-in-the-loop uncertainty review
- Audit log integrity
- Reviewer confidence and usability

**Testing boundaries.** No live Government of Canada integration is required for the initial controlled test. No production data is required. No departmental data upload is required for an initial walkthrough. TPTN remains a controlled prototype. Testing interest does not imply procurement, adoption, endorsement, production deployment, or an executed pilot. All AI-assisted outputs remain subject to human review.

**Pathway note.** A federal department may identify TPTN from the ISC Testing Stream pool and work through ISC to assess whether a controlled testing arrangement is appropriate. Any future testing arrangement would be subject to departmental fit, ISC process requirements, contracting, security, privacy, and operational readiness review.
